

EDGE™

Custom Cabinetry Lines

Innovation. Craftsmanship. Expert Installation.

Cabinetry is the backbone of a well-designed space, and we treat it that way. EDGE™ works with a curated selection of cabinet lines spanning fully custom to semi-custom, indoor to outdoor, ensuring we can match the right product to every space and budget.

Top Tier

Fully handcrafted in Pennsylvania, this line represents the highest level of custom cabinetry we offer. Every piece is built to order with no ceiling on what's possible. The aesthetic tends toward traditional and transitional, though the design teams works entirely to spec.

→ Kitchen projects at this tier typically range from \$75K to \$200K.

Second Tier

Our second tier line delivers full customization at a more accessible price point. Also entirely handmade, this line skews contemporary in its default offerings but adapts readily to client direction. It's a strong fit for modern builds where design flexibility matters as much as budget.

→ Kitchen projects at this tier typically range from \$50K to \$150K.

Third Tier

Made in Canada, this is a semi-custom line with meaningful flexibility built in. While it's more defined in its options than our top or second tier, there's room to tailor selections to a project. It's a practical choice for clients seeking quality and some customization without the investment of a fully custom line.

→ Kitchen projects at this tier typically range from \$40K to \$100K.

The background image shows a sophisticated outdoor living space. On the right, a dark-toned outdoor kitchen features a large island with a light-colored countertop. A built-in stainless steel grill is visible, with a bottle of champagne and two glasses on the island. Behind the grill is a tall, dark stone fireplace. To the left, a dark outdoor sofa is partially visible. The floor is made of large, light-colored stone tiles. Large windows in the background offer a view of a lush green landscape with palm trees. The ceiling has exposed wooden beams and a large ceiling fan.

Outdoor Cabinetry Lines

Outdoor Option A

Made in Canada and built specifically for outdoor environments, this option's cabinets feature 100% waterproof PVC boxes with two door finish options:

- Resin with a wood-look texture
- Polyethylene for a cleaner, flat appearance

Some design modifications are available, though this line is not fully custom.

Outdoor Option B

A sister company of Brown Jordan, this option is produced in Connecticut and takes outdoor cabinetry upmarket with powder-coated stainless steel construction. The material and longer manufacturing process put it at a higher price point than our alternative outdoor line, typically 30-40% more, but it delivers a level of durability and refinement that clients at the top end expect.
